**SECTION 3 – UNREGULATED SERVICE OFFERINGS****3.1 General**

The regulations set forth in this section govern the unregulated service offerings of the company and the application of rates for those services. Actual rates are contained in Section 4 of this tariff although some service-specific rates are shown in this section as well.

**3.2 Charges Based on Duration of Use**

3.2.1 Where charges for a service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:

3.2.2 Calls are billed in durational increments identified for each service. All calls that are fractions of a measurement increment are rounded-up to the next whole unit.

3.2.3 Timing on completed calls begins when the call is answered by the called party. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s). Timing for operator service person-to-person calls start with completion of the connection to the person called or an acceptable substitute, or to the PBX station called.

3.2.4 Timing terminates on all calls when the calling party hangs up or the Company's network receives an off-hook signal from the terminating carrier.

3.2.5 Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call.

3.2.6 All times refer to local time.

SECTION 3 – UNREGULATED SERVICE OFFERINGS, (Cont'd.)

3.3 Rates Based Upon Distance

Where charges for a service are specified based upon distance, the following rules apply:

- 3.3.1 Distance between two points is measured as airline distance between the rate centers of the originating and terminating telephone lines. These rate centers are assigned a set of geographic coordinates, as referenced in Telcordia Terminating Point Masterfile (TPM) which associates each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven digit telephone number with a rate center). Rate centers and their geographic coordinates are listed in the industry Local Exchange Routing Guide (LERG). Where there is no telephone number associated with an access line on the Company's network (such as a dedicated 800 or WATS access line), the Company will apply the wire or rate center of the Customer's main billing telephone number.

---

## SECTION 3 – UNREGULATED SERVICE OFFERINGS, (Cont'd.)

## 3.4 Calculation of Distance

Usage charges are based on the airline distance between the serving rate centers associated with the originating and terminating points of the call. The serving rate centers of a call are determined by area code and exchange numbers. All calls are billed from the End-user's serving rate center to the terminating point serving rate center.

The distance between the originating point and that of the destination point is calculated by using the "V" and "H" coordinates as defined by TMP/Local Exchange Routing Guide in the following manner:

Step 1: Obtain the "V" and "H" coordinates for the originating point and the destination point.

Step 2: Obtain the difference between the "V" coordinates of each of the Rate Centers. Obtain the Difference between the "H" coordinates.

Step 3: Square the differences obtained in Step 2.

Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers.

Formula:

$$\sqrt{\frac{(V_1V_2)^2 + (H_1H_2)^2}{10}}$$

**SECTION 3 – UNREGULATED SERVICE OFFERINGS, (Cont'd.)****3.17 Caller Identification Services****3.17.1 Calling Party Number Blocking**

Calling Party Number Blocking provides telephone Customers with the capability to prevent the disclosure of the calling telephone number on calls made to an exchange service equipped with Caller ID and other Advanced Custom Calling services where the calling party number may be disclosed. Calling Party Number Blocking is available on a per service basis.

Per call Calling Party Number Blocking is accomplished by the Customer dialing an activation code (\*67 for Touch-Tone) prior to placing each call for which blocking is desired. Per call blocking is automatically provided without charge to all Customers in central offices equipped to offer Caller ID or other Advanced Custom Calling Services where calling party number may be disclosed.

Per Line Calling Party Number Blocking automatically prevents the display of the calling telephone number on all calls dialed from an exchange service equipped with this option. It is not necessary to dial an activation code prior to placing the call. Calls may be unblocked on a per occurrence basis by dialing an activation code.

No business, organization or other person may use Calling Party Number Blocking where the primary purpose is to make telephone solicitation calls. The term “telephone solicitation” means the initiation of a telephone message primarily for the purpose of encouraging a person to purchase, rent, or invest in property, goods, or services or to donate to any charity or similar organization or entity without that person’s prior express invitation or permission.

The Customer-provided display device used to interface with Caller ID and Caller ID with Name must conform with the Company's Technical Reference Specifications.

**SECTION 3 – UNREGULATED SERVICE OFFERINGS, (Cont'd.)****3.17 Caller Identification Services, (Cont'd.)****3.17.4 Call Return**

This custom feature enables a Customer to place a call to the telephone number associated with the most recent call received, whether or not the call was answered. The Customer can dial a code (\*69) and the number from which the last incoming call that was placed is announced/displayed. The call will not be returned, announced, or displayed if it is marked private through the activation of per call or per line number privacy. If the Customer wishes to return the call, a code is dialed to place the call. If the called line is not busy, the call is placed. If the called line is busy, a confirmation announcement is heard, the Customer hangs up and a queuing process begins where both the originating and terminating lines are checked for a period of thirty minutes for availability to complete the call. During this process, if the called line becomes available, the originating Customer is notified by a distinctive ring that the network is ready to place the call. When the Customer picks up the telephone, the call will automatically be placed.

Call Return does not interfere with the normal operation of incoming and outgoing calls during the queuing process. Call Return is considered activated when the Customer dials the first code. The Call Return Customer is responsible for any applicable local or toll usage charges for returned calls. The service cannot be activated for all telephone numbers, for example, 700, 800, or 900 numbers.

Rates and Charges are shown in Section 4 following.
